

roman blind six point measure

step one print this page and follow the instructions

Important We require the exact inside frame to frame measurement's in millimetres for both the width and length in three different positions as demonstrated in the illustration.

Do not make any deductions from these measurements.

Tip When measuring, always look out for things like window handles, or anything that could obstruct the blinds easy operation.

Remember a Roman Blind fitted inside your window frame will permanently cover between 250mm – 300mm when pulled up or fully open and it will affect the amount of light coming through the window.

1 measure inside window frame **width** (mm)

All six measurements are required **a** _____

b _____
